

QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full to part sun.
USDA HARDINESS ZONES	5 to 10.
PLANT TYPE	Perennial.
PLANTING DISTANCE IN-GROUND	At least 4 feet apart.
CONTAINER SIZE	One plant per 12-inch or larger container.
MATURE HEIGHT / SPREAD	<p>3-N-1 Garden Treasures: 6 to 10 feet tall with a 5 to 10 foot spread.</p> <p>3-N-1 Gems of the Garden: 3 to 4 feet tall with a 4 to 5 foot spread.</p> <p>Bicolor: 6 to 8 feet tall with a 5 to 7 foot spread.</p> <p>Black Knight: 6 to 8 feet tall with a 5 to 7 foot spread.</p> <p>Giant Cascade: 5 to 6 feet tall with a 7 to 8 foot spread.</p> <p>Honeycomb: 5 to 7 feet tall with a similar spread.</p> <p>Magenta Buzz™: 3 to 4 feet tall with a 3 foot spread.</p> <p>Midnight Buzz™: 3 to 4 feet tall with a 3 foot spread.</p> <p>Nanho: 5 to 7 feet tall with a similar spread.</p> <p>Red, White & Buzz™: 3 to 4 feet tall with a 3 foot spread.</p> <p>Royal Red: 5 to 10 feet tall with a similar spread.</p> <p>White Profusion: 5 to 10 feet tall with a similar spread.</p>
BLOOM TIME	Summer to fall.
TIME TO REACH MATURITY	24 months.

Thank you for your order!

PLANT WARRANTY

We warrant perennials for 1 year and annuals for 90 days from the time of the original shipment. If for any reason you are dissatisfied, we will replace your plant with a similar or comparable one, at no charge. If your replacement is not available or it is too late in the season to ship, it will reshipe the following shipping season.

If you have any questions or concerns about your order, please contact us at 888-593-3644 or help@cottagefarmsdirect.com.

Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of the plant that is not expressly grown to be eaten.

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless, but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.

BUTTERFLY BUSHES

*Image on cover is representative of the type of plant(s) in this offer and not necessarily indicative of actual size or color for the included variety.

OUT OF THE BOX

BUTTERFLY BUSHES

Your plants have been shipped to you in pots. Please remove the plants from the packaging right away and plant them as soon as possible following the planting instructions below. If it is not possible to plant them right away, follow these important steps:

1. Roll the plastic down around each plant and place them in a sunny location.
2. Keep the plants well watered.

Note: Some leaves may appear wilted or yellow upon arrival. This is due to the stress of shipping and is nothing to worry about. Water the plant and let it recover in a shady location for a few days, then gently remove any foliage that does not recover to allow for new growth.

SHIPPED AS SHOWN

PLANTING INSTRUCTIONS

Important: Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, remove the pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.
4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.
5. Water thoroughly.

CONTINUING CARE

WATERING	<p>Adequate and consistent watering is essential during your plant's first year in the garden. Infrequent, long soakings of water that thoroughly saturate the soil are more effective than frequent, light applications of water.</p> <p>Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil or the original root ball to completely dry out. During the first summer, you may need to water as often as every few days in periods of drought and extreme summer heat. To determine if your plant needs water, dig a few inches into the soil next to the plant. If the soil is dry 2-3 inches below the surface, it is time to water.</p> <p>Over-watering can be as damaging as under-watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.</p>
	<p>Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.</p>
WEEDING	<p>Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.</p>
PRUNING	<p>Remove spent flowers as blooms fade to encourage continuous flowering. In mild areas, butterfly bushes may be pruned in fall. At this time, remove any dead or damaged growth and re-shape the plant as desired. In cold areas, butterfly bushes die back to the ground each winter. In late fall, winter, or early spring, cut any remaining growth back to ground level. New growth will emerge from the roots as spring temperatures rise.</p>

CONTINUING CARE (Continued)

FEEDING	<p>Feed your plants once every 2-3 weeks during the growing season with a water-soluble fertilizer. Discontinue feeding after September 1st so your plants can harden off for winter dormancy. Resume fertilizing when new growth appears in the spring.</p>
WINTERIZING	<p>Watering thoroughly in late fall will greatly enhance your plant's cold tolerance once the ground has frozen.</p> <p>Butterfly bushes are winter hardy, but will benefit from mulching in very cold areas. The time to winterize them is in late fall. When winterizing perennials, keep in mind that the root system is the most vulnerable to cold damage. Mulch heavily by mounding a 6-8 inch layer of shredded bark, compost, leaves, straw or other organic material around the base of each plant.</p> <p>In very cold areas, containerized plants can be brought into an unheated, protected area such as a garage or cellar before temperatures drop below freezing. Check soil moisture every 2-3 weeks and water as needed during winter.</p> <p>In spring, remove mulch from in-ground plantings. Containerized plants should be moved back out into the garden sunlight where they will begin to repeat their yearly garden performance. Butterfly bushes tend to break dormancy later in the spring than other plants, so do not be alarmed if they do not begin growing right away.</p>

SOIL PREPARATION

We recommend having your soil tested periodically by your local County Extension Office (www.nifa.usda.gov/extension or by calling 1-800-333-4636). A soil test can determine if your soil needs any amendments to enhance the growth and performance of your plants.

Ideal garden soil is easy to dig in and drains well while still holding the nutrients and water vital to plant growth. To prepare a bed for in-ground planting, spade or till the soil to a depth of roughly 12-18 inches. Next, spread a 2-4 inch layer of organic matter such as compost, shredded leaves or peat moss over the soil and mix well.
